THE COVID-19 COMMUNITY GUIDEBOOK

...because Understanding helps you to focus on Infection control instead of Confusion control

The Biggest Problem NOW is **MIS-INFORMATION**

Here are some important facts that can completely change how a community prepares:

- What you are seeing on TV is NOT the whole truth, and there's a reason for that;
- Governments and community leaders are stuck playing Confusion Control instead of Infection Control and are CAUSING more infections via mis-information... and people will die today because of it;
- Pneumonia is NOT what most people need to be worrying about and infectious particles ARE INDEED able to spread LONG after it doesn't show up in throat/nasal swabs; *beware the wrong test kits!*
- It is STILL infecting people RIGHT NOW on public transit, in apartments, grocery stores, and via our front line workers;
- Essential Services must stay open but...

...NO place is prepared or even SAFE

An Open Letter to Community Leaders, Business Owners and Employees of Essential Services, and Everyone Waiting to Know What to do;

We are experiencing the most dangerous life-threatening world-changing moment in the history of humanity. Government leaders, hospital staff, city officials, and essential business owners either don't have the right training, the right technologies in place, or even the right information about what this is and are propagating incorrect information causing further spread of the virus.

Fear is spreading fast - but the truth is even scarier than what most people are fearful of- and it's only going to get worse. But an educated population results in a prepared population. People who understand how to prepare and protect will help stop the spread. NO It's NOT pneumonia that most people need to be worried about; it's how people of all ages can suffer long-term organ damage and how easily anyone can be infected and propagate the spread that's of concern.

I know this because I know things about the Pandemic and things about this virus that are not in the public's general knowledge yet. I have training in both the Military and Public Health Response to Pandemics and I am under no oath of secrecy or Non-disclosure - I have complete liberty to share my knowledge and advice. Seeing so many preventable infections is why I am stepping up.

"It's evident that the information on TV is far behind the science so there is an urgent need to immediately train all levels of every community. If there was another word more dire than Emergency this is the time to use it."

Why should you be interested in this program? Because there's rampant mis-information and incorrect medical advice all over the news, and we continue to see first responders and healthcare workers getting sick in the thousands. Still, months into the Pandemic, nobody seems to know what to do or what to expect, and yet that information is indeed available and it's so valuable.

Who am I to give you advice? I'm a cellular and molecular biologist with experience in the area of genetically engineered biological weapons defence, so perhaps my knowledge goes far & above what is needed but I have an understanding of this virus and how to explain what's in the medical literature (i.e.: I don't get my information from the sensationalist media). More than 20 years ago I was training first responders, emergency personnel, healthcare workers, and others for this exact type of pandemic situation –a program I created 20 years ago following 9/11 and which was converted into a special television documentary back in 2003. That information is more relevant today than ever before and we're trying to get it re-released to have it freely available online ASAP.

As government officials try to calm the public with talk of ordering masks and begging for volunteers, our medical front line, law enforcement, essential employees at grocery stores, pharmacies, and senior homes continue to spread infections at a rapid pace. They need our help. Thousands of manufacturers and front line workers are coming together. I'm doing what I can too.

The GOOD NEWS is that We have a Program to help you NOW

Community Pandemic Plans

TECHNOLOGY & SOLUTIONS 4 ALL

- There is an urgent need to inform and train all levels of municipal government
- **IMMEDIATE** Solutions for every person, home, and place of business of all sectors
- The Virus **DOES** float in the air, survive on surfaces, is on our shoes and gas pumps
- Hospitals & Long-Term Care Homes **NEED** to do this **NOW** or may Face Lawsuits;
- Why the 2M rule, nasal swabs, 14 Days Quarantine, and N95 Masks are **NOT** my priority and may be historical mistakes;

This Program Can Easily be Modified for different cities all over the world; our Online Training Classes empower new Ambassadors to help their own communities, turning people of all ages and skill levels into Heroes.

Months into the Pandemic our top news stories are all about how unprepared we still are. They're all panicking about masks and ventilators, so while they're placing their orders and tracking shipments it's time for everyone to acknowledge that we all need to work together, especially when your own front line workers and essential service providers start to fail and you can no longer rely on those whose job it is to HELP you...*where else are you going to turn?*

We are a special breed living in an unprecedented time; we are an amazing country with one of the best and most resourceful workforces on Earth. Our country was built from resilient people of varying backgrounds and cultures so we CAN choose to embrace diversity and partnerships over partisanship and finger-pointing. Not only can we stand up in a time of crisis –we can lift each other up, and we can inspire people from all over the world to unite and overcome this together or die trying. Our grandparents risked their lives for our freedom and we're not going to let anything take it away, not even a deadly enemy that we cannot see. And I know this is possible....
... *because I know how to do it.*

I'm not writing this letter as a message of Hope; I'm writing it with conviction of having many solutions that can save thousands of lives. This program reveals that I've already spent countless hours building a massive international network of solutions providers, from medical devices to personal and family protection, even whole-building anti-virus tech, all for communities of every scale and scope. It can also be modified for any GPS coordinate on the planet. **We are ready.**

This program was created with multiple Key Stages in order to teach people everywhere how to prepare and cope with a Global Health Emergency. While my educational seminars were specifically focused on highly contagious genetically-engineered biological weapons, the information on how to prepare, how to cope, what to do, and how to help your communities and families is 100% what everyone needs right now without further delay. No fireman has ever been chastised for using too much water to put out a fire. And in this case it's better to protect against the worst case scenario anticipating multiple waves rather than regret not having done enough.

- 2 Things Everyone needs to do Immediately **No Matter Where You Are**
- 5 Things Every Community Needs to Have Ready
- 5 Things Every Business Owner Needs to Do TODAY
- 10 Items Every Household needs Without Delay
- Rules that Every Hospital & Senior Care Home Needs to Adopt **NOW**
- Daily Duties Every Healthcare Worker Should Do OR They'll Regret It
- Checklist for ALL Essential Employees of Every Business Type

Most industry leaders know
Efficiency improves the bottom line...
But how many have a TOTAL solutions partner!

Neutopia ecoSOLUTIONS Inc.

Smart & Sustainable Neighbourhood Program

Food, Housing, Jobs, Energy, Water and Waste
Integrating eco-Technology & ERS Systems Approach

“Transforming Sustainability Problems into Social Solutions...isn’t Just an Idea; It’s our Responsibility!”

June 2019: Neutopia Beats Google and Apple in Creating the World’s first Smart Sustainable Community Project Right Here in Ontario!!

LEAN Communities - Green Buildings - Office Towers - Hotels - Resorts - Restaurants - Commercial - Industrial - Institutional - Residential - Renewable Energy - Energy Efficiency - Energy Storage - Carbon Footprint Reduction - Control Demand - Peak Reduction - Water Conservation - Waste Management

A GLOBAL CLEANTECH COMPANY
Neutopia is a Canadian owned Cleantech Project Development Powerhouse focused on integrating unique model Renewable Energy ecoPARKS & Green Building Plans to create LEAN Communities around the world. The ERS Energy Regeneration & Recycling Solution can cut energy costs in half for just about any building type and come at no out of pocket expense to building owners, becoming the new First Step in any building efficiency program.

Armed with the world’s most diverse suite of Green Efficiency Technologies to lower operating costs by reducing energy, water and waste, Neutopia can help even the most recently built buildings uncover additional savings, guaranteed.

Pioneering a revolutionary business model that merges Corporate and Community Social Responsibility with Environmental Sustainability and Social Benevolence, Neutopia is the world’s first Social Impact Efficiency & Infrastructure Company.

Nothing is more powerful than an idea whose time has come...welcome to Neutopia!

Who is Neutopia?

Neutopia was founded in 2008 to pioneer a new type of business that combines Educational consulting with Technological services and world-leading ecoSolutions for a Sustainable Planet. It is a global network composed of talented scientists and problem-solvers from a variety of scientific disciplines; biologists, immunologists, geneticists, chemists in nanotechnologies, environmental scientists, engineers focused on clean energy and green buildings, professors, and a plethora of manufacturers of world-leading technologies, and Ambassadors as project developers who are trained to transform community problems into social solutions. From Sickness to Energy, and Water to Waste, we can solve it.

We started as a grassroots organization 12 years ago from an air mattress in a basement apartment. We tried to teach banks and investment firms about a new type of Social Benefit business model but everyone turned us away saying the idea of “Sustainability” and “Social Impact Investments” would never work. We didn’t listen to them...and within a few years we had \$800 million in Sustainability Projects submitted to the government of Canada. We were the ‘Little Engine that Could’ and we started turning heads on main street...fast.

Not only in Canada

I’ve traveled over 500,000 km around the world investigating community problems and trying to identify the best technological solutions. Kind of like the Indiana Jones of Sustainability –but striving to solve the riddles of the major problems that face our planet. It’s been an incredible adventure of a lifetime that could easily be made into a Hollywood movie - and each and every day is still exciting...so exciting that I knew I needed to train others who share the same passion. And, in following the footsteps of what made Steve Jobs so successful –*I don’t invent any one thing myself*; Instead I create the product that people need by facilitating the micro-environment that can match the problem with the right solution. This is accomplished by uniting the engineers / problem-solvers with our creative minds to figure out how best to bring it to those who may not even know they need it. In a nutshell I invented a completely unique platform to make it happen...*to actually make it profitable to solve world problems*. I cracked the code that charities failed to conceive was even possible.

“We are essentially a global force to make the world a better place: healing the sick, feeding the hungry, empowering the powerless, and giving a voice to the voiceless...transforming people with no hope into people of power... making them realize that Together we can all become Heroes, one community and one project at a time. The only thing needed to get started is a Smart Phone and occasional access to WiFi. Leave the rest to us.”
